

IS YOUR ORGANIZATION READY

Shipping emissions are predicted to increase between 50% and 250% by 2050 – depending on future economic and energy developments.

This is not compatible with the internationally agreed goal of keeping global temperature increase to below 2°C compared to pre-industrial levels, which requires worldwide emissions to be at least halved from 1990 levels by 2050.

The MRV

On behalf of
Shipping & Offshore Services Norway
and
Verifavia Shipping

you are invited to join us
an informative seminar on the EU's
maritime emissions management program
